PROFESSIONAL SUMMARY

Results-driven Senior Mobile Engineer with **4 years** of experience shipping **6+ production apps** across Flutter and Android Native. Specialized in Clean Architecture, real-time systems (WebSocket, SignalR), and hardware SDK integrations. Delivered solutions to numerous businesses operating across B2B e-commerce, F&B, POS, and enterprise inventory domains. Proven impact: reduced app load times by up to **60%**, achieved **99.9% crash-free** rates, and maintained **60 FPS** rendering on catalogs with 5,000+ items.

TECHNICAL SKILLS

Mobile Frameworks:

- ❖ Flutter (Expert – 4 yrs)
- ❖ Android Native (Kotlin/Java)

Architecture:

- ❖ Clean Architecture / SOLID Principles
- ❖ MVVM

State Management:

- ❖ Bloc/Cubit (Advanced)
- ❖ GetX
- ❖ Provider

Real-time & APIs:

- ❖ WebSocket / SignalR / Socket.IO
- ❖ RESTful APIs (Dio, Retrofit)

CI/CD & Source Control/Management:

- ❖ CI/CD (GitHub Actions, Fastlane)
- ❖ FVM
- ❖ GitHub / Gitlab
- ❖ Bitbucket / Jira

Databases:

- ❖ Hive / SQLite / SharedPreferences / Secure Storage

Additional skills:

- ❖ Sentry, Firebase, Unit / Widget / Integration Testing, App Center, Figma, Lottie, Rive,...

PROFESSIONAL EXPERIENCE

Eggstech | Mobile Developer

May 2025 – Present

► **Rocky App – B2B E-commerce Platform** | Team size: 10 (1 lead Mobile, 2 Mobile, 3 BE, 2 Web, 1 QC, 1 PM)

– Google Play | App Store

Role: Lead Mobile

- Architected multi-layered **Clean Architecture** foundation with independent feature modules – reduced feature delivery time by **~30%** through modular separation.
- Developed custom **Kotlin MethodChannel** for QR code generation and real-time payment sync.
- Implemented **FCM + deep-linking** strategies to improve user re-engagement through targeted push notification campaigns.

- Configured **SignalR** event listeners to force-logout users in real time – enforcing server-driven session control across devices.
- Orchestrated hybrid **Provider + GetX** state management.
- Integrated **Sentry** for real-time crash and performance monitoring, enabling proactive issue detection and faster resolution across the app.

► **Truyền thuyết Champong App – F&B Chain Application** | *Team size: 7 (1 Mobile, 2 BE, 2 Web, 1 QC, 1 PM)*

– *Google Play | App Store*

- Engineered a real-time customer support module using **SignalR**, enabling seamless delivery of text, image, and audio messages.
- Implemented an **automatic nearest-branch selection** feature to enhance the ordering experience, ensuring faster delivery times and better food quality for customers.
- Engineered native Kotlin QR caching – storage reduced by **35%**, image load from **1.2s → 0.3s**.
- Utilized **Stream-based techniques** to update the UI across multiple screens simultaneously.
- Integrated **Facebook, TikTok, and Google** Ads SDKs for install attribution – recording app-install events triggered by ad clicks across all three platforms.
- Engineered an **auto-retry** mechanism with randomized backoff (up to 3 attempts) for failed API calls – improving resilience on unstable networks for a smoother UX.
- Customized **push notification sounds** for both foreground and background states to strengthen alert visibility.
- Orchestrated hybrid **Bloc/Cubit + GetX** state management.
- Integrated **Firebase Crashlytics** for real-time crash reporting and monitoring, strengthening app stability tracking.

► **RFID Scanner – Enterprise Inventory Management** | *Team size: 9 (1 Mobile, 3 BE, 2 Web, 1 QC, 1 PM, 1 BA)*

- Developed **MethodChannel bridge** for handheld **RFID scanner SDKs** – **<50ms** Flutter-to-native response time.
- Built **data-chunking algorithms** processing **10,000+** items/session – memory reduced by **~45%** vs. full-dataset loading.
- Designed EPC scanning + native audio feedback – scan cycle from **3s → 0.8s**, operator throughput up **~25%**.
- Built a feature that automatically updates the app to the latest version without requiring manual installation.
- Implemented structured **error logging** – persisting logs to the local device and syncing them to the backend for centralized diagnostics.
- Built the base project architecture using the **MVVM pattern** and managed state with **Provider + GetX**.

ECR Vietnam | Mobile Developer

Feb 2024 – Apr 2025

► **Rail Pro App – Point-of-Sale System** | *Team size: 14 (2 Mobile, 1 lead Mobile, 1 lead BE, 4 BE, 2 Web, 1 lead QC, 2 QC, 1 PM)*

- Architected **bidirectional offline-sync engine** (Hive/Floor) ensuring **100%** POS uptime – automatically synchronizing transactions daily once the connection is restored.
- Built **PAX payment SDK** integration via MethodChannel – secure transactions/day across credit, debit, and e-wallet.
- Maintained **60 FPS** for **5,000+** product catalogs – initial load from **8s → 2.5s** via lazy loading and widget caching.

► **IMPL App – Logistics & Delivery Platform (Singapore)** | *Team size: 9 (1 Mobile, 3 BE, 2 Web, 2 QC, 1 PM)*

- Developed Kotlin plugins for **OCR parcel scanning** – manual entry reduced by **~70%**, processing **300+** parcels/day.
- Engineered **dynamic UI rendering engine** with **3** runtime-switchable languages (VI, EN, ID) – zero restart required.
- Achieved **99.9%** crash-free via **Sentry monitoring** – resolution time from **48h → 6h** with structured triage.

EcarAid Company | Flutter Developer

Jun 2022 – Jan 2024

► **eCa App – Automotive Community & Roadside Rescue Platform** | *Team size: 10 (2 Mobile, 1 lead Mobile, 1 lead BE, 2 BE, 2 Web, 1 QC, 1 PM)*

– *Google Play | App Store*

- Engineered location services via **Google Maps API** (autocomplete, markers, polylines).
- Architected booking system for **3** service types with real-time **FCM** updates.
- Built **real-time group chat** with multimedia support across **50+** active car owner communities.
- Managed CI/CD via **AppCenter** with consistent **bi-weekly** deployments; contributed UI/UX collaboration, QA, and API validation.

EDUCATION

Bachelor of Software Engineering

Ho Chi Minh City University of Foreign Languages – Information Technology (HUFLIT) | GPA: 8.0 / 10.0

LANGUAGES

- **English:** Professional working proficiency – Comfortable reading technical docs, writing specs, and collaborating with international teams.

KEY STRENGTHS

- **Legacy Modernization** – Refactored monolithic codebases to Modular Clean Architecture, reducing build times by ~40% and enabling parallel team development.
- **Hardware Integration Expert** – Deep experience bridging Flutter with native hardware SDKs (RFID scanners, PAX terminals, thermal printers) via Platform Channels.
- **Performance-Obsessed** – Consistently delivering 60 FPS UIs, reducing screen load times by 50–70%, and optimizing memory across diverse device profiles.
- **End-to-End Ownership** – Leading mobile features from architecture through deployment, monitoring, and iterating based on production metrics.
